

# Re-envisioning Medical Education: Transforming Constraints into Opportunities

## Part I – Transforming the Current Reality

**Peter Horneffer, MD**

Executive Dean  
All American Institute for  
Medical Sciences, JM

Director  
Medical Education Programs  
Lecturio.com

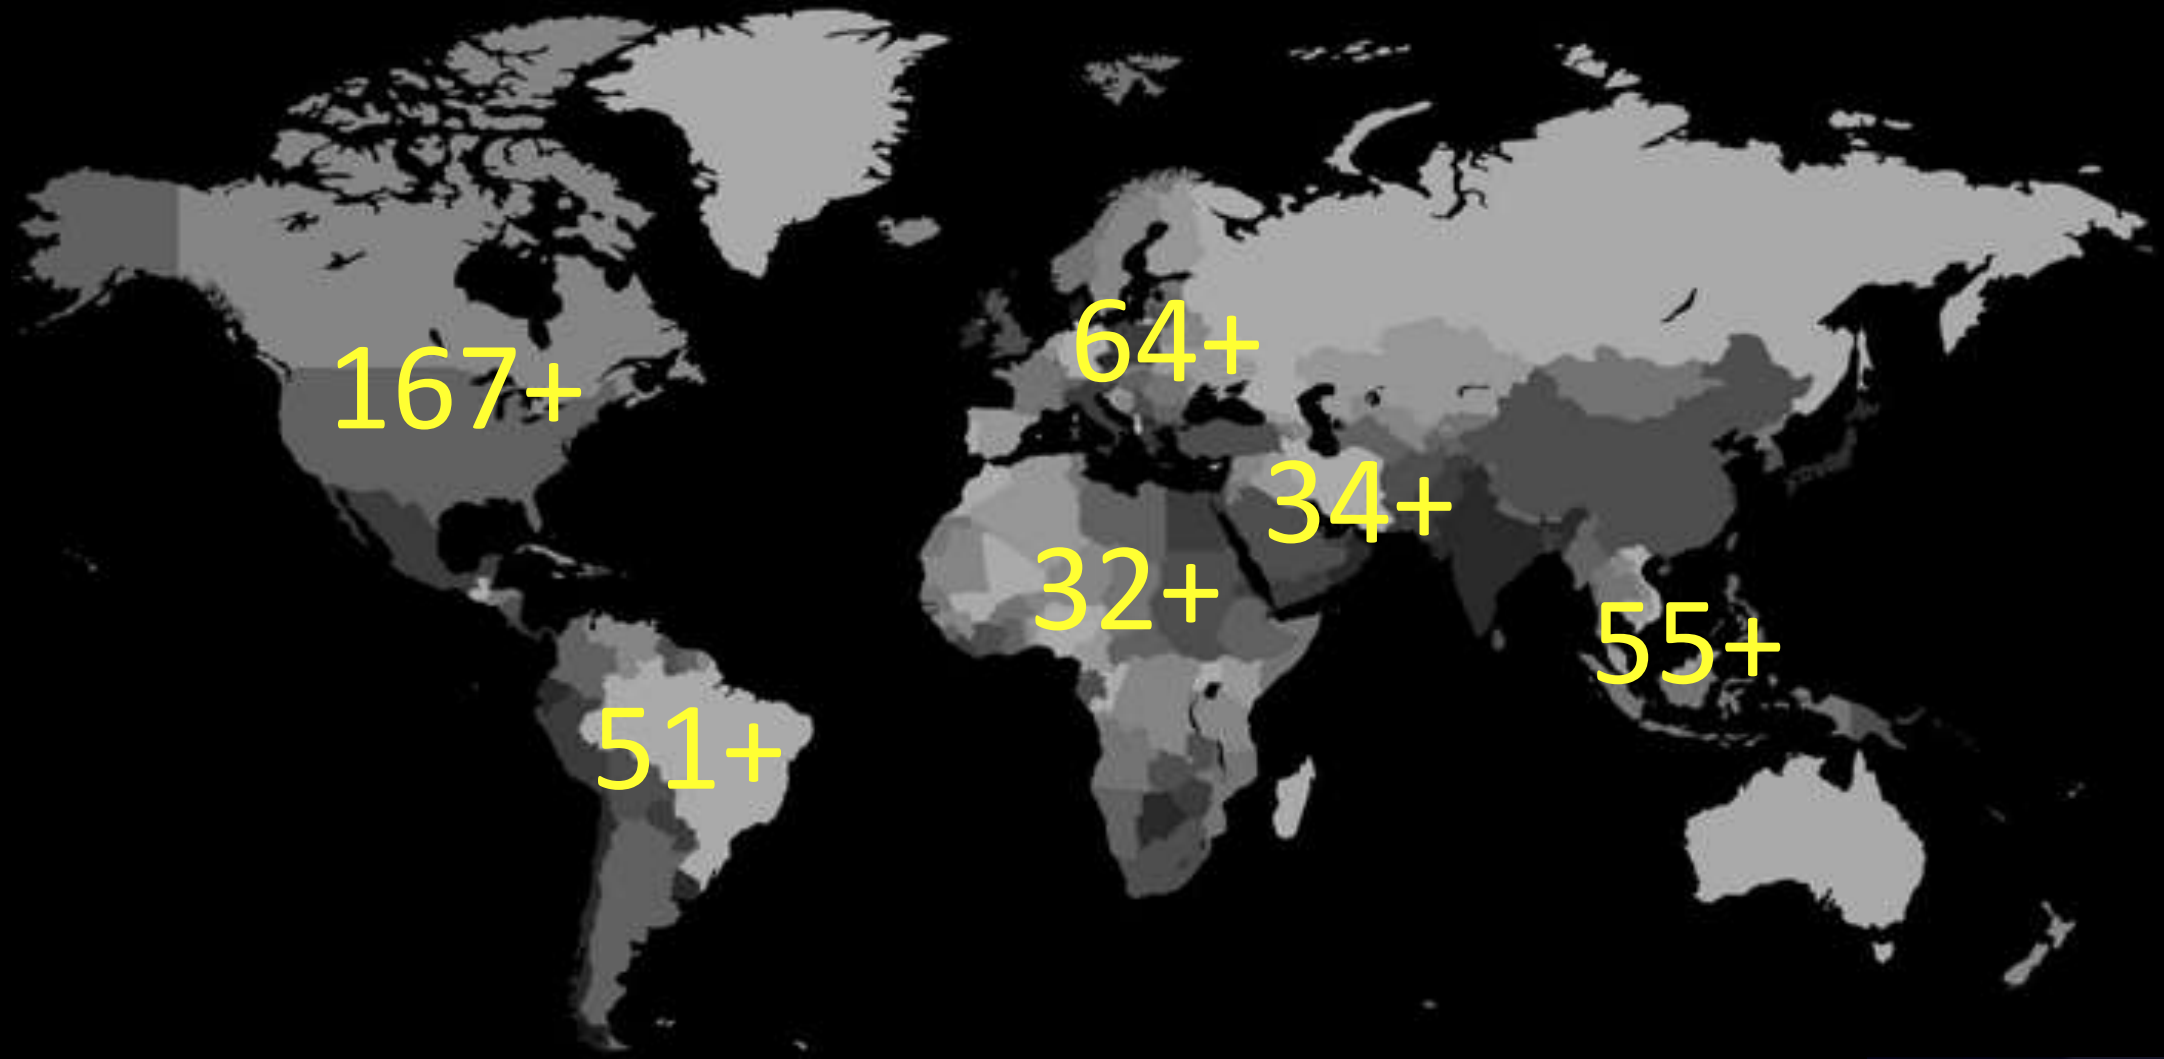

Cardiac Surgeon, Sinai Hospital  
Baltimore, Maryland

**Atsusi “2c” Hirumi, PhD**

Professor  
Instructional Design & Technology  
Medical Education | Learning Sciences  
College of Medicine | College of Education  
University of Central Florida

Professor Extraordinary  
Dept. of Financial Accounting  
College of Accounting Sciences  
University of South Africa (UNISA)

# A Global Community – We're in this together.

# Who are you?

60 Medical School Deans and Rectors

188 Faculty Members

46 Directors/CEOs

25 Instructional Designers & Curriculum Experts

3 Faculty Development Experts

8 Education Consultants

12 Students

61 “Other”

A grayscale world map serves as the background for the slide. The continents are depicted in a lighter shade against a darker background, with a subtle grid of latitude and longitude lines.

Participants

When you think about  
Medical Education today,  
what is your chief  
concern?

*“We were all sent to our rooms by God so that we could think of what we might do better”*

Anonymous ICU Nurse

Pre Pandemic

Post Pandemic

A black and white photograph of a crowded hospital ward. Numerous patients are lying in metal beds, some covered with blankets. The room is filled with people, and the beds are arranged in rows. The lighting is somewhat dim, and the overall atmosphere is one of a busy, crowded medical facility.

# Epidemics, Pandemics lead to Reform

- Cholera – Improved sanitation and spurred vaccine development
- 1918-1919 Influenza epidemic (Spanish Flu) highlighted economic disparities. Led to improved housing and healthcare.

## What will be its Silver Lining?

Emergency Remote Teaching

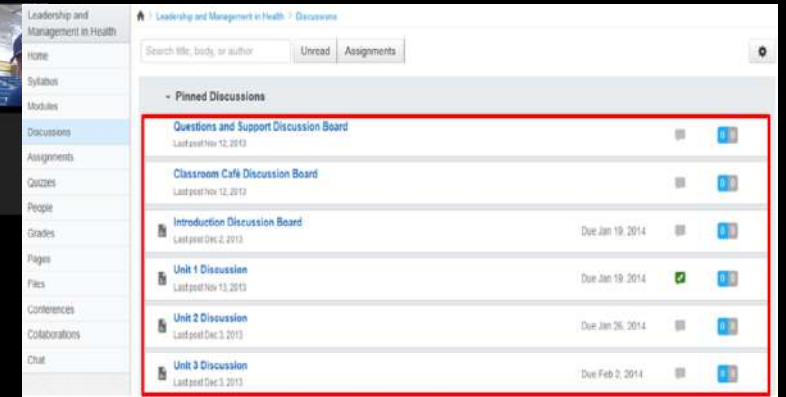

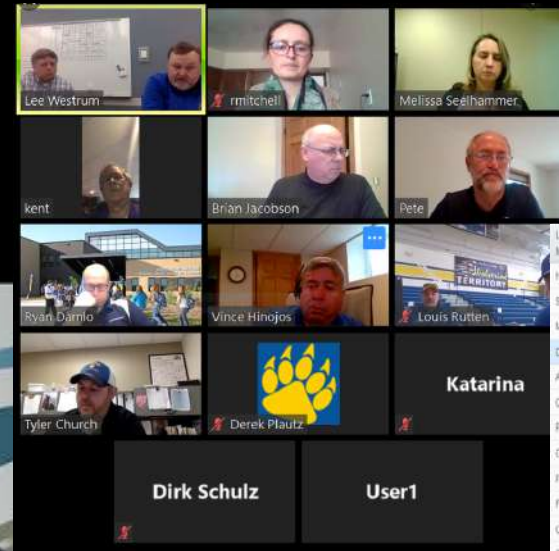

# COVID 19

## What will be its Silver Lining?

Effective Evidence-Based Education

# The Current Reality

## Ethics (Lecture 1: Introduction)

- **Ethics (Moral Philosophy)**—>commonly divided into three (not unconnected) branches:
  - **Applied Ethics** is conc. with what we ought to do (and think) about particular moral issues;
  - **Normative Ethics** is concerned with what sorts of moral considerations are important, generally; e.g., which principles we ought to act on, and/or how it is morally good to be;
  - **Metaethics** is concerned with what is going on when we do normative and applied ethics (either formally or informally), and involves asking questions about, e.g., the meaning of moral language, whether there are any objective moral truths, how we know about what the right moral principles are, etc.
- **Universality**: we all have at least some moral views —> For some people, this will be what makes moral philosophy worth thinking about (because it is a branch of philosophy which clearly engages with something of universal concern).  
Ma se la morale è di tutti... —>according to someone, this will be a reason to doubt that philosophy has much to offer: "Most people manage to think about moral issues quite well, without studying moral philosophy: why should we think that philosophers know more about morality than anyone else?"
- Making use of moral theories and arguments, fame uso al fine di giustificare determinati ragionamenti morali oltre che per "caccia di più". Perhaps the importance of moral philosophy for moral thinking more generally is that moral thinking makes use of—or could usefully make use of—moral theories and arguments.
- **Generality of moral theories**: But can moral theories be any use to moral thinking? Are they too general to be of use? Aren't all moral cases different?
  - Even if all the cases are different in many respects, it does not follow that there are no general principles which govern them;
  - And anyway, there is no reason to think that all moral theories are highly general: moral philosophers often discuss very specific issues, without invoking completely general theories; some theories are theories about very specific things!Che effetti hanno i nostri pensieri? Se pensiamo a qualcosa—>moral thinking ci aiuta a capire meglio noi stessi, e, di conseguenza, a capire meglio gli altri.
- **Moral theory and evidence**: metodo in qualche modo "scientifico", analogo a quello utilizzato dalle scienze naturali. Rather than making empirical predictions which are tested by observation, moral theory delivers results which we can test for their acceptability in particular cases.
- **Moral philosophy is difficult**: not because it involves a great many technical manoeuvres, like logic or some metaphysics and philosophy of language; but because it calls for good judgement.  
There is not a teachable algorithm or technique for good judgement; knowing what is worth taking seriously in morality calls for sensitivity, honesty and experience of serious moral thought. (These are not things which only philosophers have!)

## Emergency Remote Teaching<sup>1,2</sup>

What should we  
keep, improve  
& discard?

# Transforming the Current Reality

## One Framework: Evidenced-Based Medical Education

# Transforming the Current Reality (5. Apply Evidence)

A silhouette of a person pushing a large ball up a hill, symbolizing the challenges of EBM & EBME.

# Challenges with EBM & EBME

- Time
  - Access to educational research and literature
  - Time
    - Skills and knowledge necessary to ask questions, and acquire, appraise, and apply evidence
      - Time

# Resources for facilitating EBME

## Instructional Designers<sup>4</sup>

- Analyze learners, goals, context
- Define objectives
- Design and align assessments and strategies
- Acquire and appraise evidence
- Curate and develop materials.
- Align instructional elements
- Align research, theory, and practice

## Learning Platforms

- Curated high quality content
- Guided delivery
- Built-in evidence-based learning strategies and instructional design
- Data tracking and feedback
- Deliverable remotely **!COVID-19!**

The T wave corresponds to which of the following?

- ☐ Junction between the end of the QRS complex and the start of the ST segment
- ☒ Ventricular repolarization
- ☐ Time from the start of atrial depolarization to the start of ventricular polarization
- ☐ Atrial repolarization
- ☐ Atrial depolarization

How sure are you about your answer?

## Electrocardiogram (ECG)

- Shows the flow of electrical excitation current through the heart
- Used to diagnose heart disease
- Used to monitor heart rate and rhythm

## Electrocardiogram (ECG) Interpretation

# Polling Questions

1. Do you think that medical education will emerge from the pandemic in an improved state?
2. Do your colleagues base their educational methods on evidence-based practices?
3. Do you currently have an instructional designer on staff to facilitate evidence-based education?
4. Do you employ a learning platform to facilitate curriculum delivery?

# Reflections:

1. Based on what you are doing now, what would you like to...
  - A. Keep?
  - B. Modify?
  - C. Eliminate completely?
2. What new approaches would you like to try?
3. What barriers are keeping you from trying those approaches?

# WHAT'S NEXT?

**June 17<sup>th</sup>, 1 pm ET (6 pm UK time)**

**Next week we will discuss active student-centered learning and focus on ways to implement and augment a “flipped classroom”**
