Post Pandemic

Epidemics, Pandemics lead to Reform

- Cholera Improved sanitation and spurred vaccine development
- 1918-1919 Influenza epidemic (Spanish Flu) highlighted economic disparities. Led to improved housing and healthcare.

Ethics (Lecture 1: Introduction)

Applied Ethics is conc. with what we cupit to do land think about particular moral issues: **Normative Ethics** is concerned with what sorts of moral considerations are important, generally, e.g., which principles we cugit to act on, and/or how it is morally good to be; <u>Medicethics</u> is concerned with what is going on when we do normality and applied whice (either formally or informally), and involves asking questions about, e.g., the *meaning* of moral language, whather there are any objective moral *truths*, how we *know* about what the right moral principles are, etc.

 Universality: we all have at least some moral views —> For some people, this will be what makes moral philosophy worth thinking about (because it is a branch of philosophy which clearly engages with something of universal concern)

Making use of moral theories and arguments, farme use at fine di plustificere determinati ragionamenti morali ohter oher "captri di plu". Penhaps the importance of moral philosophy for moral thinking more generally is that moral thinking makes use of -or could usefully make use of -moral theories and arguments.

Generality of moral theories: But can moral theories be any use to moral thinking? Are they too
general to be of use? Aren't all moral cases different?

 Even if all the cases are different in many respects, it does not follow that there are no general principles which govern them;

And anyway, there is no reason to think that all moral theories are highly general; moral philosophers offer alcours very specific issues, without invoking completely general theories; some theories are theories about very specific things!

Che effetti hanno i nostri pensieri? Se pensiamo a qualcosa-->moraty thinking ci aluta a capire meglio noi stessi, e, di conseguenza, a capire meglio gli altri.

 Moral theory and exidence: metodo in quabhe modo "scientifico", analogo a quello utilizzato dalle science naturali. Rather than making *ompirical* predictions which are tested by observation, moral theory delivers results which we can test for their acceptability in particular cases.

 Moral philosophy is difficult: not because it involves a great many technical manoeuvres, like logic or some metaphysics and philosophy of language; but because t calls for good judgement.

judgement. There is not a teachable algorithm or technique for good pudgement; knowing what is worth taking seriously in morally calls for sensitivity, honesty and experience of serious moral thought. (These are not things which only philosophere have)

Emergency Remote Teaching^{1,2}

Tyler Church

What should we keep, improve & discard?

Transforming the Current Reality

One Framework: Evidenced-Based Medical Education

Table 1. Comparing the practice of Evidence-Based Medicine (EBM) and Evidence-Based Medical Education (EBME)

	EBM		EBME
1.	Assess Patient's Needs	1.	Assess Educational Needs
2.	Ask Questions	2.	Ask Questions
3.	Acquire Evidence	3.	Acquire Evidence
4.	Appraise Evidence	4.	Appraise Evidence
5.	Apply Evidence	5.	Apply Evidence

5.	Apply Evidence	5. Apply Evidence

Transforming the Current Reality (3. Acquire Evidence)

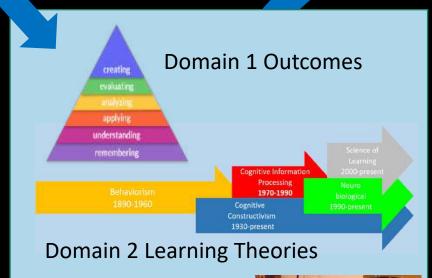

Domain 1 – Outcomes

Figure 1. Domains of Evidence

Domain 3 – Instructional Approaches Practice 1 & 2 Findings

Domain 3 Instructional Approaches

Practice 3 – Acquire Evidence

Practice 4 – Appraise Evidence

Scale	Factors
Quality of Evidence Ranging from 1-2-3 Iowhigh	Appropriateness of sample size, sampling method, data collection, data analysis, and conclusions. Reliability and validity of instruments, procedures, data and findings.
Strength of Evidence Ranging from 123 Iowhigh	Reported research design, ranging from meta-analysis and systematic review of research, to experimental and quasi- experimental studies, to case studies and ethnographies, to professional judgement and anecdotal reports.
Relevance of Evidence Ranging from 1-2-3 Iowhigh	Consistency of reported methods (including subjects, intervention, measured outcomes) to target learner population, intervention, outcom and conditions.
	F

Transforming the Current Reality (5. Apply Evidence)

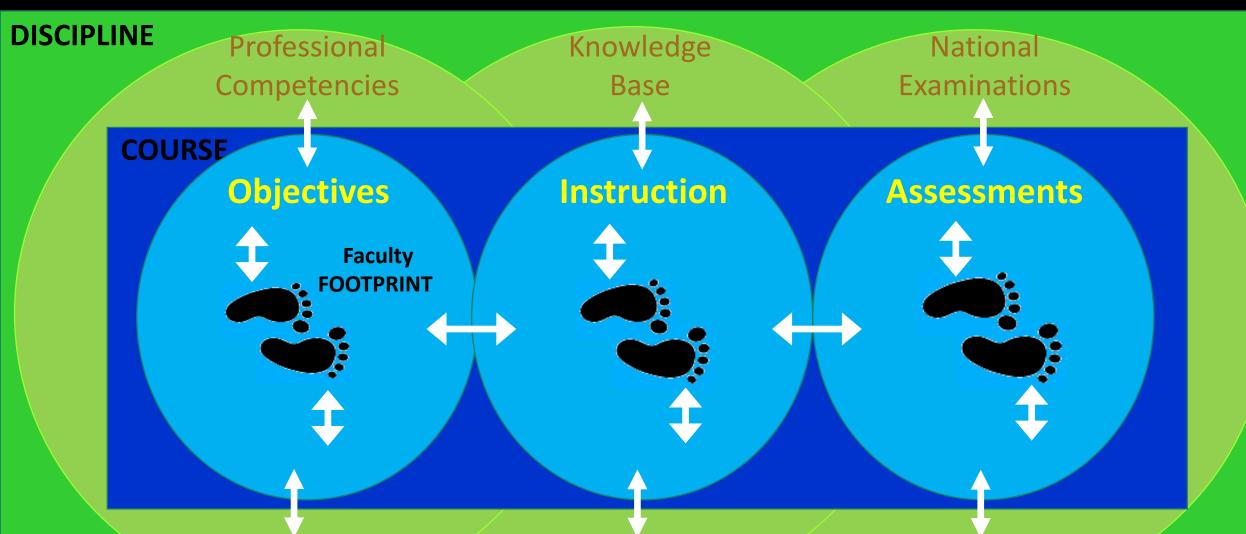

Figure 3. Internal and external alignment of fundamental instructional elements

Challenges with EBM & EBME

- Time
 - Access to educational research and literature
 - Time
 - Skills and knowledge necessary to ask questions, and acquire, appraise, and apply evidence
 Time

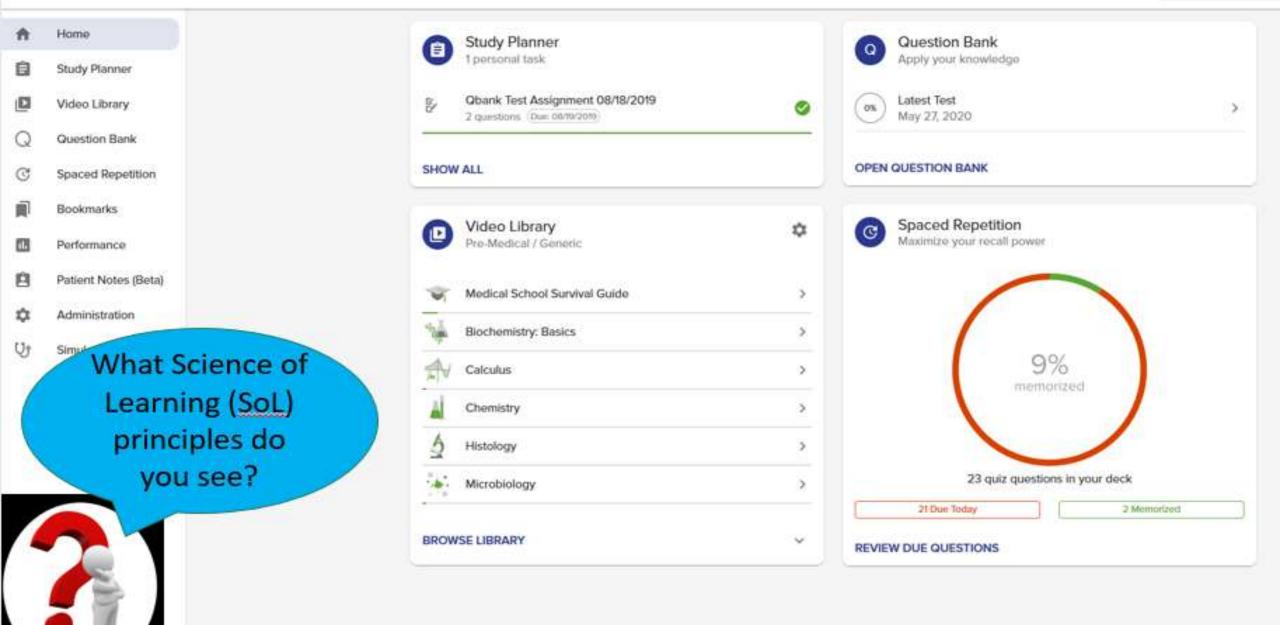

Resources for facilitating EBME

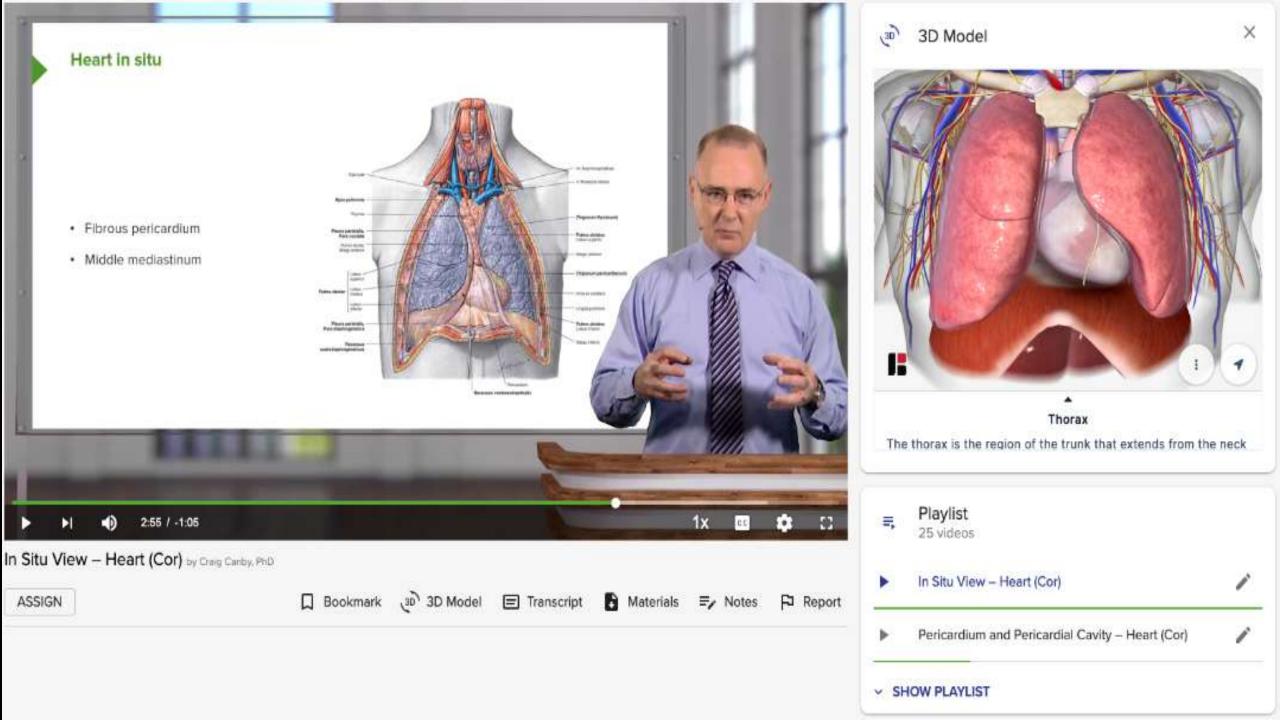

Instructional Designers⁴

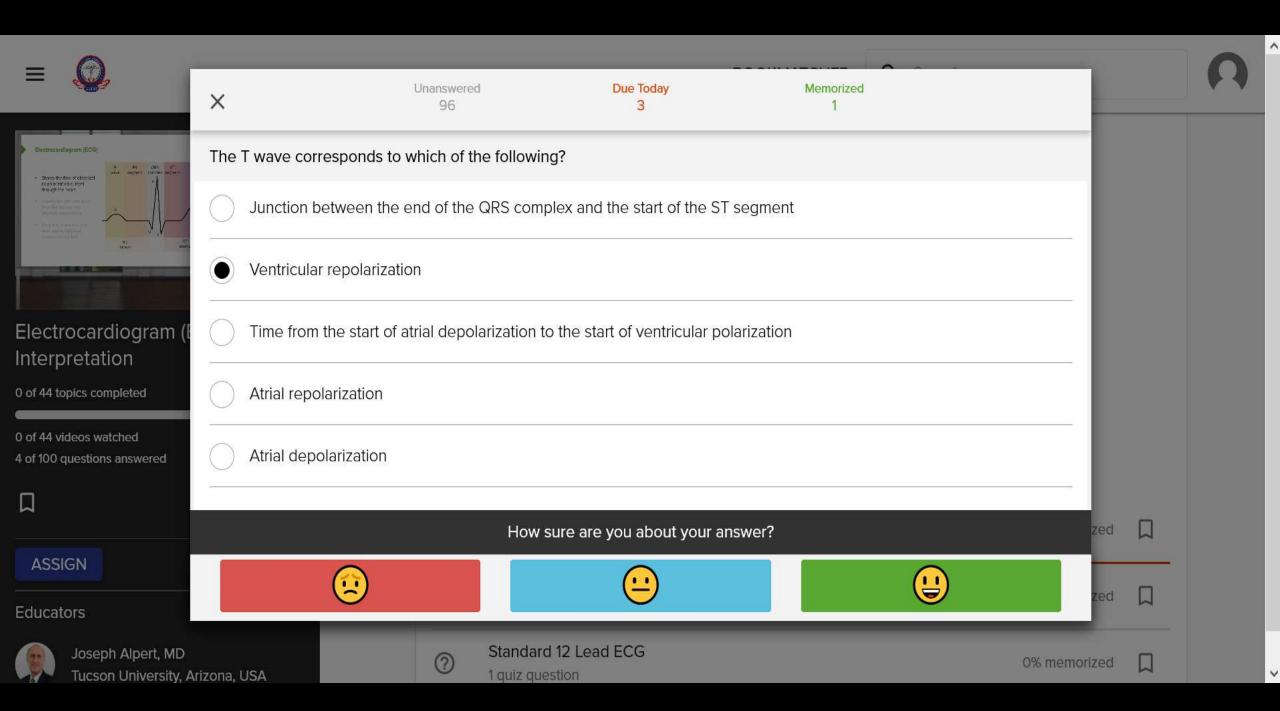

- Analyze learners, goals, context
- Define objectives
- Design and align assessments and strategies
- Acquire and appraise evidence
- Curate and develop materials.
- Align instructional elements
- Align research, theory, and practice

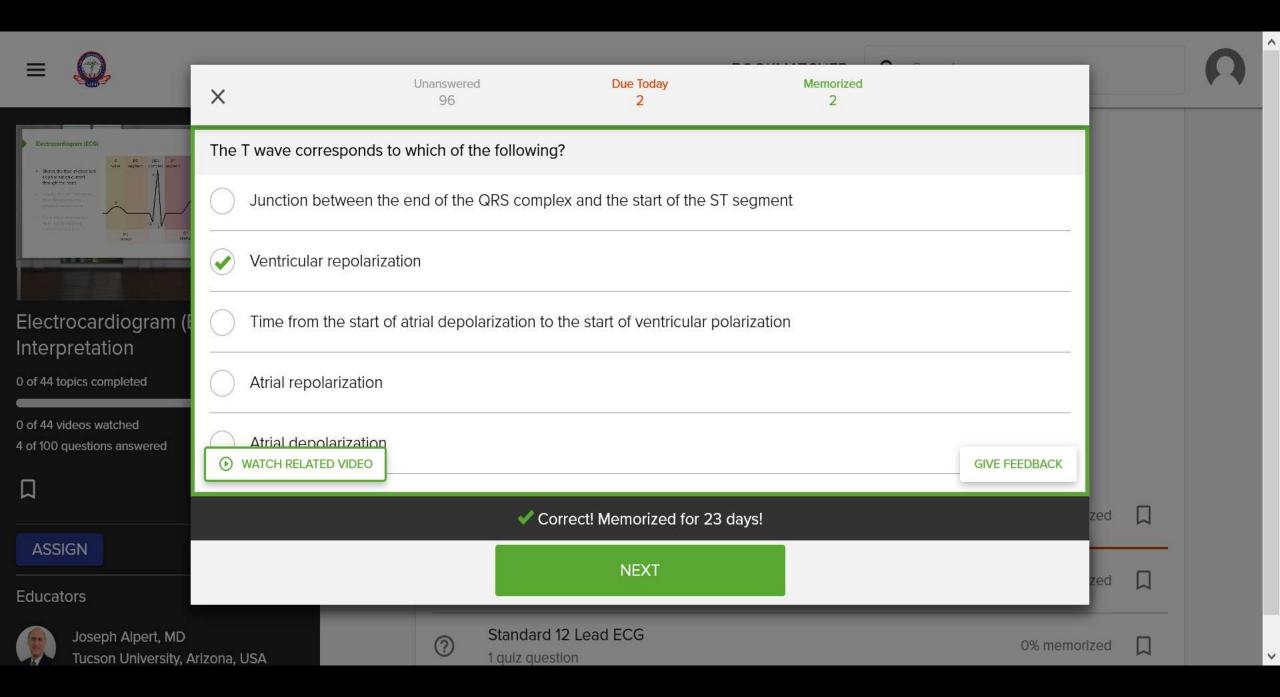

Learning Platforms

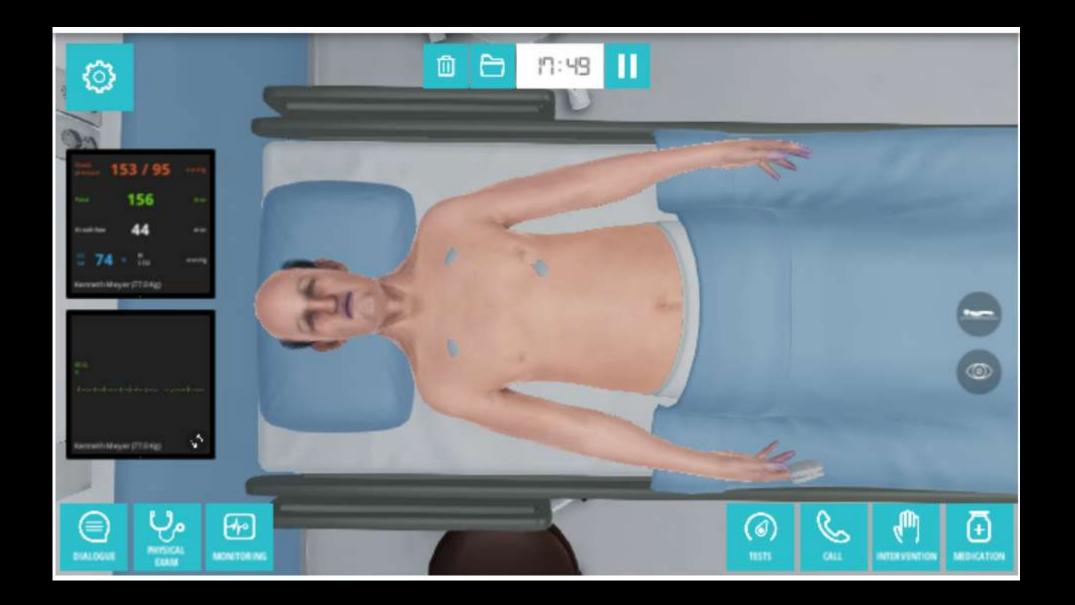

- Curated high quality content
- Guided delivery
- Built-in evidence-based learning strategies and instructional design
- Data tracking and feedback
- Deliverable remotely **!COVID-19!**

Six Fundamental Evidence-Based Learning Strategies

- Pairing graphics with words
- Linking abstract concepts to concrete examples
- Alternating materials being studied- interleaving
- Spaced learning
- Assessing to boost retention
- Asking probing questions

Polling Questions

- 1. Do you think that medical education will emerge from the pandemic in an improved state?
 - 2. Do your colleagues base their educational methods on evidence-based practices?
 - 3. Do you currently have an instructional designer on staff to facilitate evidence-based education?
 - 4. Do you employ a learning platform to facilitate curriculum delivery?

Reflections:

 Based on what you are doing now, what would you like to.
 A. Keep? B. Modify? C. Eliminate completely? 2. What new approaches would you like to try 3. What barriers are keeping you from trying those approaches?

June 17th, 1 pm ET (6 pm UK time)

Next week we will discuss active student-centered learning and focus on ways to implement and augment a "flipped classroom"
